

Building Commissioning

Payback!

According to a U.S. Department of Energy funded study, the payback from commissioning a new facility is 1 to 5 years, depending on the facility size, type, and complexity. This rapid return of investment is due to technology that, without commissioning, is all too often not installed and operated correctly.

Today's buildings depend on sophisticated devices that control lighting and comfort systems and affect energy expenditures for operation. Unless these devices and systems are installed, calibrated, and operating properly, the bottom line for the building will likely be unsuccessful - less comfortable to occupants, more costly to operate, and disliked by all.

Commissioning is a “best practice” in the construction industry and resolves these problems.

We believe that a Commissioning Agent is first and foremost an advocate for the owner. Commissioning is needed to ensure that the owner receives the facility that they purchased, not an approximation. Whether it's future maintenance considerations, construction shortcutting, or on-the-fly design changes, the Commissioning Agent is in a unique position to offer unbiased advice and ensure that project requirements are being met appropriately.

Apollo BBC is experienced in commissioning large facilities and their complex systems. In addition to our commissioning experience, we are expert in the design, installation, and operation of HVAC systems. Our expertise also includes general construction methods, building envelope (windows, walls, roofs), and sustainable design.

Owner's Agent
Whole Building Commissioning
Retro-Commissioning
Operation Verification
LEED Accredited Professionals

Our integrated, whole building approach sets us apart and maximizes our benefit to your project. Our focus is to join your team, understand your needs and make a measurable difference - not just produce a stack of papers.

We pride ourselves on our ability to understand your needs, work toward meeting your criteria for success, communicate our findings, and assist with difficult decisions along the way.
